... is important to you, be sure to choose a manager that has strong sorting capabilities.

**Search** Bookmark Collection

Browsers create simple directory trees of bookmarks, and the only way to find a bookmark is to browse the tree. Most **bookmark** managers, on the other hand, provide **search** capability, allowing you to quickly find a **bookmark** by its title or URL. Some provide more extensive **search** capability, allowing you to **search** by **keywords**, exact strings, dates, or even to find duplicate URLs.

#### Multiple Browser Support

One of the most frustrating things about using multiple browsers is the incompatibility of formats used to store **bookmarks**. Netscape uses a single HTML file usually called **bookmark.htm**, while Internet Explorer saves favorites as individual "shortcuts," and stores them in numerous **folders** on your hard drive.

All of the bookmark managers reviewed here support multiple browser formats...for some. The most noticeable is the lack of hierarchical structure--even if your original **bookmarks** were organized that way.

Instead, Powermarks provides extensive and fast **searching** capability, including **keyword search**. **Keywords** are automatically generated when you import your **bookmarks**, though for some reason these include all of the folder names in a Netscape **bookmark** file, making them less useful than they might be. Fortunately, there is a terrific command called "**Fetch**" that **retrieves** the actual title, description, and **keywords** directly from a Web page.

Unique to Powermarks is its clickable "dictionary" of **keywords**. Clicking any **keyword** displays all **bookmarks** associated with that **keyword**, arguably an acceptable alternative to a hierarchical structure. You can delete unsuitable **keywords** from this dictionary, and control which **keywords** are associated with each **bookmark**.

URL status checking is particularly strong, with a programmable scheduler, and the ability to repair...

... browser add-on that lets you store Web pages from your browser of choice into **searchable folders**. The Save commands appear either on the right-mouse button in Explorer or the personal toolbar (or **bookmarks**) in Netscape. Like Organizer, you can add your own **keywords** and notes to each saved page. There is an option to skip the graphics, which can save time and disk space. Content is organized using a familiar **folder** format.

Content can be moved and copied among the folders, which can be shared with...

... pages. Don't be afraid to delete bookmarks you don't use anymore. Also, make **folders** within the **bookmark** menu, **organized** by broad **topic**, and then **store** individual **bookmarks** within those **folders**. Subdirectories of those **folders** are a must if you've got a lot to keep track of. Most browsers have a "sort" or "organize" function that will automatically alphabetize your **bookmarks**.

WHY WE CARE ABOUT BOOLEAN **SEARCHES**. You should care deeply about Boolean **searches** because they allow you to find an exact string of words, like an exact company name or a **phrase**. You can request Web pages containing both x AND y, as opposed to documents with...

**folders** into other **folders** as you go. **Internet Shortcuts** For a really  
special **site**, don't just add it to your **Favorites** list, create a  
Shortcut on your Windows desktop for one-step access. First go to the **page**  
, then right-click on a blank area on the page and select Create Shortcut.

Hey...do that: Open a page, then select Edit, Find (on This Page), and  
reenter a **keyword** you were **searching** for.

Netscape Navigator 3.0

#### Beat the Bookmark Beast

If you've got more than a dozen sites in your **Bookmark** file, it pays  
to organize them. Hit Ctrl-B for instant access to your Bookmark file. From  
here you can add **folders** by selecting Item, Insert **Folder**. You can also  
insert cool separator lines, which give your Bookmarks a more organized  
look...like. Once your list gets beyond a dozen, you'll want to put them in  
**categories** to keep them manageable. Select **Bookmarks**, Go to Bookmarks,  
then Item, Insert **Folder**. Assign a **category**, then move **bookmarks** into  
it.

#### Bookmarked Bookmarks

Netscape Communications' Netscape Navigator, Hypertext Markup Language (HTML), and Hoover's PK Baseline are part of the intranet solution created to manage desktop access to the Internet at HarperCollins Publishers Information Center/Archives. The Internet is used for information retrieval, organization, and distribution. The company, which employs special librarians, answers question for clients. Staff went about searching for useful World Wide Web sites, which were **bookmarked** and organized into **classifications**. The IntraWeb intranet uses Netscape Navigator, and staff has extensively used the Yahoo! and AltaVista search engines. The bookmarks became the execution point for development of the HarperSource home page; these were systematized onto a section called ReferenceSource: Your Guide to Internet Research. The links included Books, Company Information, Newspapers, and Telephone Directories, which were listed in a Table of Contents. When a subject is clicked, users can link to sites bookmarked. Over 400 Web sites were available, and the group decided to provide help in using Internet search engines and to provide sample searches for ReferenceSource. Subject areas provided in HarperSource include Archives, Information Center Services, Publishing Industry, Training, and Guidelines. Other topics covered include page design, reaction to HarperSource, training, editing/updating pages, effect on usage, and changes to the Information Center's profile.

GRADE: A

Hitachi Computer Products' ZooWorks Research Personal 2.0, an organizational Internet software package, helps World Wide Web users track information with some degree of automation that does not require individual **bookmarking** for each page. It automatically captures and **indexes** Web pages as users surf the Web, and users can coordinate and keyword search the full text of captured, indexed pages offline using the browser. ZooWorks provides a more robust, new query language supporting quotations around phrases for matching all words precisely. Also supported are Boolean operations and phrase searches with more than one search expression. Attractive interface enhancements include top level button controls for the Quick Search option, the Custom Search option, the Preference option, and the help option, and for organization of search results, importing from and

exporting to other users' ZooWorks caches, and management of the trash bin. A fast, efficient cache and a proprietary indexing database form the basis of ZooWorks, and searching speed is enhanced because the index is searched instead of the cache. Faster indexing is also provided in this release, but when users exit the program from its taskbar-based service, ZooWorks still disables the browser until the user deletes proxy settings invoked by the program.

Metasearch tools that query multiple engines can expand searches on the Web. Quarterdeck's WebCompass 2.0 is the premier search tool, ideally suited for users who do a lot of research-intensive projects and need to organize and store lots of searches, and for searches that need to be repeated or updated often. Symantec's Internet FastFind is a collection of Internet utilities that employs WebFind as the metasearch engine component to conduct fast searches. Iconovex's EchoSearch 1.07 breaks information down into Qualified Results, **Index**, and Concepts, and can search Netscape **Bookmarks** or Internet Explorer as well. Frontier Technologies' CyberSearch 3.0 focuses on conducting searches on the Internet as well as networks and hard disks; its interface tab contains many result categories, including Marketing, References, and Travel. Lycos' Lycos' Web search, which is the metasearch component of the collection of Internet utilities, offers searches on the Lycos database CD-ROM.

CE Software's WebArranger 2.0, a newly named personal information manager (PIM)/Internet organizer for the Macintosh, was formerly called Arrange. WebArranger gets good marks overall for tools that emphasize contact management, including text information options for organizing uniform resource locators (URLs), e-mail addresses, and phone numbers and addresses as records. The data is organized in a Finder-type **folder** hierarchy called topics. Records formats and **topics arrangements** are very customizable, allowing users to create **hot lists** and addresses in ways that work best for the particular individual. The Grabber feature allows users to import any item highlighted in a browser into the WebArranger database with just one keystroke, regardless of whether WebArranger is active. Intelligent agents URL Agent and FTP Agent respectively monitor URLs and automatically attempt file downloading until the transfer is complete.

Netscape Navigator's Bookmark tool is useful, but limited. OnBaseth Technology's DragNet 1.03 replaces the browser's bookmark files with a more convenient, searchable database, using the Macintosh's drag-and-drop features for adding more URLs. Although it was meant to work with Web browsers, DragNet also supports e-mail and Internet protocols. For example, it will automatically launch an e-mail program after a user clicks on an e-mail address database entry. The application's Directory window shows the **bookmark** file alphabetically, with collapsible **folders**. URLs can be moved between **categories**, and merely typing in the first few letters of a category will open that **folder**. Descriptive text can be added to entries.

XMan Software's xToolsOne 1.0 for the Macintosh, a collection of 10 Adobe Acrobat plug-ins for production artists and workgroups using Acrobat's Portable Document Format (PDF), provides useful functions in many instances. However, other items included are poorly chosen and not particularly useful to either user group. Modules support annotation, time stamping, folded page corners, footnoting, **bookmarks**, clickable **index** creation, text selection functions, and more. One of the most useful functions is xDateIt, which time-stamps annotations, a nice feature for collaboration on editorial decisions. Other good entries include xMakeLinks and xMakeBookmarks for automated assignment of links or **bookmarks** to all **index** or table of contents entries. A planned upgrade to xToolsOne should address many of its deficiencies and make it the useful product it strives to be.

Lab tests of Frontier Technologies' Super Highway Access CyberSearch for Windows reveal that the Internet browser includes a useful integrated catalog of Web sites, which reduces costly Web surfing. Users can search offline for the sites they need, and the product is available through a six month subscription that costs much less than lengthy online searches. During test, the product showed off the CyberSearch Lycos Catalog component with indexes to over 500,000 Web pages with short abstracts; users can employ the Organizer Web browsing utility to create **categories** with tabs and **bookmarks** for viewing. MathSoft's MathCAD 6.0 has new programming features, extended math tools, and integrated access to the World Wide Web (Web). The product avoids tricky FORTRAN syntax, and allows users to

include local variables and routines, conditional statements, loops, and recursion in programs.

Lotus's Smarttext 3 converts word processing files into online documentation. This is an excellent facility for publishing digital documents. The Windows-based program works with many popular word processing and graphics formats. Smarttext generates tables of contents and **indexes**. The system supports **bookmarks** and annotations, and includes a reader module for document viewing. A book metaphor simplifies the operation. Original source files are preserved for future reference. Smarttext performs under the control of a Builder module, which analyzes each document and then proceeds to build an outline. The document Builder accepts input with regard to organization, style, and more. The Builder converts documents at an average rate of 10 pages per minute. The system builds links and converts the pages for optimum efficiency for online reference.

Abstract (Basic): US 20030101216 A1

NOVELTY - A copy of **bookmarks** stored in a sub-folder A' is created and marked with the name of the sub-folder. The copy is stored in a sub-folder B', such that when the sub-folder B' is accessed, the originally stored **bookmarks** and the copy are displayed in a distinguishing manner.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) computer program product for linking two sub-folders in **bookmark** folder;
- (2) apparatus for linking sub-folder in **bookmark** folder; and
- (3) computer system for linking sub-folders in **bookmark** folder.

USE - For linking sub-folders in **bookmark** folder used as navigation tools for web portals or websites providing Internet services including e-mail, forums, search engines, on-line shopping malls.

ADVANTAGE - Enables linking of two or more sub-folders in a **bookmark** folder by displaying content of both the sub-folders simultaneously.

DESCRIPTION OF DRAWING(S) - The figure shows a flowchart explaining

the process to request categories in web portals.

Abstract (Basic): US 20030101175 A1

NOVELTY - The webpages **bookmarked** in several sub-folders are searched using a keyword. All the webpages that contain the keyword are stored into a new sub-folder named using the keyword.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) program on a recorded medium for merging two or more sub-folders into one sub-folder in a **bookmark** folder;
- (2) apparatus for merging two or more sub-folders into a one sub-folder in a **bookmark** folder; and
- (3) computer system for merging two or more sub-folders into one sub-folder in a **bookmark** folder.

USE - For merging several sub-folders into one sub-folder in a **bookmark** folder through Internet.

ADVANTAGE - Enables a user to store a copy of webpages **bookmarked** in different sub-folders that are related in another sub-folder with a appropriate name.

DESCRIPTION OF DRAWING(S) - The figure shows a flowchart explaining the processes of the **bookmark** folder merging method.

 Abstract: Using the financial industry as a context, the study seeks to address the issue of the **classification** of electronic **bookmarks** in a multi-user system by investigating what factors influence how individuals develop **categories** for **bookmarks** and how they choose to lclassify **bookmarks** within those organizational **categories** . An experiment was conducted in which a sample of 15 participants was asked to **bookmark** and to **categorize** 60 Web sites within Internet browser **folders** of their own creation. Based on the data collected during this first component of the study, individual, customized questionnaires were composed for each participant. Whereas some of the questions within these surveys focused on particular **classification** decisions regarding specific **bookmarks** , others looked at how the participant defined, utilized, and structured the category **folders** that comprised his or her classification system. The results presented focus on issues investigated in Kwasnik's (Journal of Documentation, 1991, 47, 389-98) study of the factors that inform how individuals organize their personal, paper-based documents in office environments. Whereas classification attributes culled from questionnaire responses nominally resembled those identified by Kwasnik, it was found that a number of these factors assumed distinctive definitions in the

electronic environment. (23 Refs)

Abstract: We extend the notion of bookmark management by introducing the functionalities of hypermedia databases. PowerBookmarks is a Web information organization, sharing, and management tool, which parses **metadata** from **bookmarked** URL and uses it to index and classify the URL. PowerBookmarks supports advanced **query**, classification, and navigation functionalities on collections of **bookmarks**. PowerBookmarks monitors and utilizes users' access patterns to provide many useful personalized services, such as automated URL bookmarking, document refreshing, and bookmark expiration. It also allows users to specify their preference in bookmark management, such as ranking schemes and classification tree structures. Subscription services for new or updated documents of users' interests are also supported. (17 Refs)

Information gateways provide targeted discovery services for their users, giving access to Web resources selected according to quality and subject coverage criteria. Information gateways recognise that they must collaborate on a wide range of issues relating to content to ensure continued success. This report is informed by discussion of content activities at the 1999 Imesh Workshop. The author considers the implications for subject based gateways of co-operation regarding coverage policy, creation of metadata, and provision of searching and browsing across services. Other possibilities for co-operation include working more closely with information providers, and disclosure of information in joint metadata registries.

Record Type: Abstract

Journal Announcement: 3604

Using the financial industry as a context, examines the issue of the classification of electronic bookmarks in a multi-user system. Investigates the factors that influence how individuals develop categories for bookmarks and how they choose to classify bookmarks within those organizational categories. Conducts an experiment in which a sample of 15 participants was asked to bookmark and categorize 60 Websites within browser folders of their own creation. Presented results focus on issues studies in Kwasnik's study of the factors that inform how individuals organize their personal paper-based documents in office environments. Whereas classificatory attributes culled from responses nominally resemble those identified by Kwasnik, finds that a number of these factors assume

distinctive definitions in the electronic environment. Concludes that the application of individual instances of classificatory attributes and the distinction between Content and Context Attributes emphasized by Kwasnik play a minimal role in the development of a multi-user **classification** system for **bookmarks** .

**Designing a Web bookmarks page for reference desk use.**

Author(s): Carr, Alan F; Stibravy, Robert  
Bulletin of the Medical Library Association vol. 87, no. 1, pages 80-82  
Publication Date: January 1999  
ISSN: 0025-7338  
Language: English  
Document Type: Journal Article  
Record Type: Abstract  
Journal Announcement: 3401

In August 1997, the Reference Reading Room of the Louise M. Darling Biomedical Library at the University of California at Los Angeles was remodeled, and the new reference workstation was linked to the library's local area network, which provided access to the Web and other online systems and programs. Part of the new configuration for the reference desk workstation involved selecting and bookmarking a number of Websites to enhance the provision of reference desk service. Outlines the methodology employed to eliminate duplication accrued on three separate systems and to develop a single, organized, and manageably comprehensive Website bookmark system. Explains the logic behind the creation of a limited number of main subject **categories** and **subcategories** into which **bookmarked** Websites are placed.

**A filing cabinet for Web pages**

Lynch, Jim  
Windows Sources , July 1, 1998 , v6 n7 p66, 1 Page(s)  
ISSN: 1065-9641  
Company Name: askSam Systems  
URL: <http://www.asksam.com>  
Product Name: SurfSaver

Presents a favorable review of SurfSaver (39.95), a software program that saves entire Web pages to a local disk from askSam Systems of Perry, FL (800). Says SurfSaver's excellent save, search, and folder-exchange capabilities make it a useful tool for research on the Internet. Adds it offers several search methods, and can send folders as attachments, and is supported by Windows NT 3.51 and 4.0, and Windows 95. States once Internet Explorer 4 is open, SurfSaver gives the user the option to **search** its filing cabinet by full test, **keyword** , URL, notes, title or date. Concludes **Internet** Explorer 4 users who need to do research or who just want to snag their **favorite Web pages** for future references should check out SurfSaver. Contains one screen display. **Offline browsing and beyond**

Lake, Matthew J

PC/Computing , October 1, 1997 , v10 n10 p178, 1 Page(s)

ISSN: 0899-1847

Company Name: DataViz

URL: <http://www.dataviz.com>

Product Name: Web Buddy 1.1

Presents a mixed review (three of five stars) of Web Buddy 1.1 (\$40), an offline browser from DataViz (800, 203). Like competing products, the program can save individual pages, pages to which a designated page links, or even whole sites or directories within sites. Unlike competing products, it can also recreate the text and formatting of a Web page in a word processing format. It has a **bookmark** manager that stores **bookmarks** in tabbed **categories** rather than a directory tree format or **folders**. Except for its ability to export Web pages into word processors, this program is nothing special and is priced higher than competing products. Concludes that a working trial version may be downloaded from DataViz's Web site. Includes one screen display. (djd)

**Web browsing made better**

Loshin, Peter

PC World , January 1, 1996 , v14 n1 p88, 1 Page(s)

ISSN: 0737-8939

Company Name: Netscape Communications

Product Name: Netscape Navigator; Netscape SmartMarks

Presents a favorable review of Netscape Navigator 2.0 (\$49) and a mixed review of NetScape SmartMarks 1.0 (\$24.95), two Internet tools from Netscape Communications Corp. (415). Navigator now includes integrated e-mail and Usenet clients, support for Multipurpose Internet Mail Extension Files, and Java (a programming language for Internet applets). Its e-mail client supports MIME attachments and will support Secure MIME for encrypting a digitally signing messages and Secure Courier which provides secure credit card transactions over the Net. The program supports frames which let a user view and interact with multiple Web windows on the same browser screen as well as plug-in viewers for viewing inline graphics. SmartMarks is an add-in **bookmark** manager with 300 **bookmarks** organized in **topical folders**. It can also monitor Web sites for content changes. Says it ``scores well for concept, but only average for execution.'' Includes two screen displays. (djd)

NEWSPAPER CODE: HC

DOCUMENT TYPE: Performance Review-Comparative; Newspaper article

LANGUAGE: English RECORD TYPE: ABSTRACT

ABSTRACT: Rather than organizing **bookmarks** into folders, Powermarks uses a **keyword** dictionary, starting a **search** for the address as soon as the user begins typing a **keyword**. Another way to find an address is to scroll through the keyword dictionary. Powermarks users can set up a free account called NetSync to store bookmarks on the Web, then download them to any computer. OnePlace, without moving or changing anything, indexes and cross-references from an array of e-mail, word processing, spreadsheet, presentation and graphics files. OnePlace looks like a Web page, but can be customized to display as much or as little information at a time as the user wishes. OnePlace displays anywhere from one to four windows at a time, with tabs on each one to take the user to calendars, contacts, Internet areas, e-mail and recently used documents. You can only check your e-mail with certain e-mail applications, like Microsoft Networks' Hotmail, but OnePlace can locate any e-mail stored on your hard drive.

**Web Services Offer Solutions to Bookmark Overload**

Lawlor, Julia

New York Times, p 11

Jul 13, 2000

ISSN: 0362-4331

NEWSPAPER CODE: NYT

; Newspaper article

LANGUAGE: English RECORD TYPE: ABSTRACT

ABSTRACT: One advantage of Blink is that descriptive phrases can be added to identify each link, while a browser like Internet Explorer allows only the site's title. Links can be displayed in different fonts and colors. Bookmarks can be sorted alphabetically and by how often they are used and when they were used last. Blink also allows the user to drag and drop links from one **folder** to another and to search the full text of Web pages in its database, not just the titles. It will display related sites. (The site has a database of 10 million links). Backflip allows access to its links from cell phones and other wireless devices, and it offers its services to 250 partner Web sites, including TheStreet.com and Salon.com. If a group of users is sharing a list of links, each one is notified every time a new page is added. A new feature called My Daily Routine lets you put together a string of sites you tend to visit every day. You can flip quickly through those Web pages, much as you might channel surf on a television. Backflip also provides a list of **sites** related to your top 10 **favorites**. Some **bookmark** management **sites** will take a list of **Web pages** (the entries are called **bookmarks** in the Netscape browser and **favorites** in Internet Explorer) and automatically **categorize** them. Others give their users things like color coding to make it easier for users to do their own organizing. All will upload bookmarks from a browser, let the user get access to them from any computer and share them with others. Users can search the collection of bookmarks submitted by other members to the site; doing that is often a more refined way of conducting a search than perusing the entire Web. If several members of a family use the same computer, establishing an account for each member can eliminate the need to search

through a long list of links.
